

Sample Router Security Review

7 Findings

7.1 Low Risk

7.1.1 Loss of user funds due to unreturned leftover tokens in amount

Description: The SwapRouter::_performSwap function fails to return unused input tokens.

Impact: Users lose any portion of input tokens that are not consumed by the DEX swap.

Proof of Concept: SwapHelper.sweep(tokenIn, positionSwapper) returns leftovers elsewhere.

Recommended Mitigation: Implement deterministic post-swap cleanup and refund leftover tokenIn.

Resolution: Acknowledged
