L-3: Inconsistent error handling across deposit paths

Source: target/contracts/Bridge.sol:L20

Summary: The deposit paths in target/contracts/Bridge.sol:L20 and target/contracts/Bridge.sol:L75 use inconsistent error revert messages and event signatures, making off-chain monitoring fragile.

Recommendation: Standardise error messages and event signatures across all deposit code paths. Document the canonical shape in CONTRIBUTING.md.

Resolution: Acknowledged.
