

Spearbit Sample Audit Report
Client: Sample Lending

5.1.1 Privileged setter accepts zero address

Severity: Critical Risk

Context

setOwner in contracts/Owner.sol:10 lacks a zero-address guard.

Impact

Loss of contract ownership.

Recommendation

Add a require(_o != address(0)) check.

Resolution

Acknowledged.

5.2.1 Reentrancy in withdraw allows fund theft

Severity: High Risk

Context

withdraw in contracts/Vault.sol:42 calls token before updating.

Impact

Vault drain.

Recommendation

CEI pattern.

5.3.1 Stale oracle price used for liquidation

Severity: Medium Risk

Context

Liquidator reads oracle in contracts/Liq.sol:80 without timestamp freshness check.

Impact

Bad debt during stale-price windows.

Recommendation

Add staleness check.

5.4.1 Missing event emission on parameter change

Severity: Low Risk

Context

setParam in contracts/Config.sol:25 does not emit an event.

Impact

Reduced off-chain auditability.

Recommendation

Emit a ParamChanged event.

5.5.1 Inconsistent NatSpec comment style

Severity: Informational

Context

NatSpec comments in contracts/Token.sol:5 mix /// and /** */.

Impact

Code style only.

Recommendation

Standardise on one style.

5.6.1 Cache storage reads in a local variable

Severity: Gas Optimization

Context

Loop in contracts/Loop.sol:200 reads the same storage slot N times.

Impact

Higher gas cost.

Recommendation

Cache the storage slot in a local variable.
